

JUSTIN ACE D. ARDEÑA

Iloilo City, Iloilo, Philippines | 09937608892 | justinace20@gmail.com | github.com/Justin-Ardena
[linkedin.com/in/justin-ace-ardeña-129874326](https://www.linkedin.com/in/justin-ace-ardeña-129874326)

3rd-year BS Information Technology student majoring in Cybersecurity, with a strong interest in Networking, Cybersecurity, and Software Development. Currently developing skills through hands-on projects, self-learning, and certifications. Experienced in exploring full-stack development, API integration, and emerging technologies, with a growing interest in Machine Learning. I am eager to build a career in Networking or Cybersecurity while continuing to expand my software development skills.

TECHNICAL SKILLS

Networking: Cisco Packet Tracer, CLI Configuration, TCP/IP, Subnetting, Network Troubleshooting
Frontend Development: HTML, CSS, React, TypeScript, Tailwind CSS, Bootstrap
Backend & Databases: JavaScript, Node.js, Flask, PHP, Python, Java, C++, MariaDB, PostgreSQL, MongoDB
Machine Learning: Scikit-learn, Statsmodels, Matplotlib, NumPy, Pandas
Tools & Platforms: Git/GitHub, Netlify, Vercel, XAMPP, NetBeans
Other Software: Microsoft Word/Excel/PowerPoint, Canva, Adobe Photoshop

CERTIFICATIONS

- Cisco CCNA 1: Introduction to Networks (Course Completion)
- Cisco Networking Academy Cybersecurity (in progress)
- Cisco Networking Academy Linux Essentials (in progress)

PROJECTS

aquAlman - National AI Fest hackathon 2026 Top 5 Finalist - ML/FullStack Developer 2026 - Present
Tech Stack: React, Vite, Tailwind CSS, Flask, MariaDB, Scikit-learn, Statsmodels, Matplotlib, NumPy, Pandas, Leaflet.js

- Developed **AquAlman, a web-based predictive coastal intelligence system for illegal fishing risk assessment in Northern Iloilo coastal areas**, using AI-driven risk classification, vessel-activity trend analysis, and rule-based patrol prioritization.
- Led the development of the system's AI/ML components, implementing Random Forest risk classification, statistical trend analysis, and data-driven patrol prioritization.
- Helped develop the Flask backend and REST APIs, integrating ML models, data processing, database operations, and core system logic.
- Contributed to the React frontend and interactive Leaflet.js dashboard, connecting AI-generated risk classifications, vessel hotspots, and verified community reports.
- Designed and implemented data preprocessing and ML workflows using Scikit-learn, Pandas, NumPy, and Statsmodels, integrating historical enforcement records, satellite vessel detections, and verified community reports.
- Contributed to **AquAlman being recognized as a Top 5 Finalist in the National AI Fest Hackathon 2026 – Open Category**.

ABCMS - Animal Bite Care Management System - Fullstack Developer 2026
Tech Stack: TypeScript, Vite, Tailwind CSS, PHP, MariaDB

- Developed a full-stack web application for managing animal bite incidents, patient records, exposure assessments, and vaccination treatments.
- Built the React/Vite frontend, implementing responsive interfaces for patient, animal, incident, assessment, and treatment management.
- Developed the PHP backend and REST APIs to handle business logic, data validation, authentication, and communication between the frontend and database.
- Designed and managed the MySQL database, including relationships between patients, animals, bite incidents, treatments, vaccine schedules, and user accounts.
- Implemented role-based access control and secure authentication for administrators and system users.
- Developed end-to-end workflows for incident recording, injury categorization, treatment management, and vaccine dose tracking

EDUCATION

West Visayas State University Iloilo City, Iloilo
Bachelor of Science in Information Technology — Major in Cybersecurity Expected 2028

- Relevant Coursework: Networking, Systems Analysis & Design, Database Management, Web Development, Human Computer Interaction, Integrative Technology, Object-Oriented Programming, Data Structures & Algorithms
