BSIT student (Cybersecurity track) pursuing networking, systems administration, and IT support roles. Cisco CCNA-track student who designs, secures, and administers a self-hosted Linux server environment, with hands-on experience in firewall configuration, containerized service deployment, and remote access administration.

TECHNICAL SKILLS

Systems & Server Administration: Linux (Debian), System Maintenance & Monitoring Docker, Portainer, SSH, Bash/CLI, UFW/Firewall Configuration, Tailscale, Pi-hole, Cockpit

Networking: Cisco Packet Tracer, CLI Configuration, TCP/IP, Subnetting, Network Troubleshooting

IT Support: Technical Troubleshooting, Customer Support, Documentation, Remote Support Tools

Frontend Development: HTML5, CSS3, JavaScript, React, Tailwind CSS

Backend & Databases: PHP, Java, MySQL, PostgreSQL, MongoDB, Supabase, Firebase

Tools & Platforms: Git/GitHub, Netlify, Vercel, XAMPP, NetBeans

Other Software: Microsoft Word/Excel/PowerPoint, Canva, Adobe Photoshop

CERTIFICATIONS

- Cisco Networking Academy — IT Customer Support Basics (Course Completion)
- Cisco CCNA 1: Introduction to Networks (Course Completion)
- Cisco Networking Academy Cybersecurity (in progress)
- Cisco Networking Academy Linux Essentials

PROJECTS

Homelab — Self-Hosted Server Administration 2026 - Present

Tech Stack: Debian Linux (OS), Docker, Portainer, UFW, Tailscale, Pi-hole, Cockpit, Jellyfin, Sonarr, Radarr

- Repurposed an aging laptop into a dedicated home server, installing and administering Debian Linux entirely headless over SSH
- Configured UFW firewall with a default-deny inbound policy, scoping LAN access to specific service ports to reduce attack surface, paired with Tailscale for secure remote access without exposing ports to the public internet
- Deployed and orchestrated a multi-container service stack using Docker and Portainer, including Pi-hole for network-wide DNS filtering and Cockpit for monitoring
- Built an automated media pipeline with Sonarr and Radarr for content acquisition, integrated with Jellyfin for self-hosted media streaming

Dental Clinic Inventory System 2026

Tech Stack: React, Vite, Tailwind CSS, Supabase, Vercel

- Developed and deployed a full-stack inventory management system for real-time tracking of clinic supplies and equipment
- Integrated Supabase for database storage, authentication, and real-time synchronization

Booking and Ordering System 2026

Tech Stack: PHP, MySQL, Tailwind CSS, XAMPP

- Designed a full-featured booking and ordering system with user-facing reservation flows and an admin panel
- Implemented server-side logic in PHP with CRUD operations backed by a normalized MySQL database

Local Horse Race Betting Simulation 2026

Tech Stack: Java, Java Swing, NetBeans, JFrame

- Built a real-time horse race simulation and betting application with a fully interactive Java Swing GUI

EDUCATION

West Visayas State University Iloilo City, Iloilo *Bachelor of Science in Information Technology — Cybersecurity Track* *Expected 2028*

- Relevant Coursework: Networking 1, Systems Analysis & Design, Database Management, Web Development, Human Computer Interaction, Integrative Technology, Object-Oriented Programming, Data Structures & Algorithms
